【英語学・英語教育】

Kobe City College of Technology has been stretching its boundaries year by year, becoming more of a global think tank as new connections with universities and colleges around the world are made. English classes have become easier to teach since the students can see that the world is a global workplace and that they will need to have better communication skills in order to function on the global stage. It is my pleasure to teach English communication classes because for many engineers communication skills even in their native language are indeed lacking. By helping students to communicate in English by speaking and listening skill enhancement as well as using visuals through presentations, they are able to have more enriched lives with more fulfilling relationships with their peers, future coworkers and supervisors.

Once communication skills have been developed, the higher level classes and Humanities courses allow for more focus on creative thinking and ways to use their specialized skills in cooperation with their English skills. ESL/EFL study aids and projects are a way the students can help me improve future classes and also offers students a chance to do group projects with students in other majors. It is always very enjoyable to see students working together and fostering new friendships across the departments.
